Creating a Box

This guide demonstrates how to construct our standard sized product shipping containers.

Written By: Dozuki System

INTRODUCTION

This guide demonstrates how to construct our standard sized product shipping containers.

No special skills are needed to properly construct shipping boxes: however, product appearance and box quality are important for the over presentation to customers.

Here we will walk through how to safely and effective build a cardboard box that best ensures the product will be protected and the customer will appreciate the "out of the box" experience.

|--|--|

Step 1 — Creating a Box

- Grab the appropriate box for the item.
- ⓘ **Note:** The box should fit the item you are shipping while leaving room for packaging material.

Step 2

- Press the creased edges along the longer sides of the box.
- Locate the two open ends of the box.
- At each end there are two small flaps attached to the narrow sides of the box.
- Press these flaps towards the inside of the box until they are perpendicular.
- On the side where you folded in the two smaller flaps, locate the long and narrow flap that is flat along the outer edge.
- Locate the part of the flap with a crease and fold the top portion with the crease inwards until it is perpendicular.
- Fold the entire flap inwards until it is flush with the top of the box.
- Fold down the rounded rectangular flap that is attached to the other flap and insert it into the slit on the side of the box.

Step 3

- Insert the item into the box.

Step 4

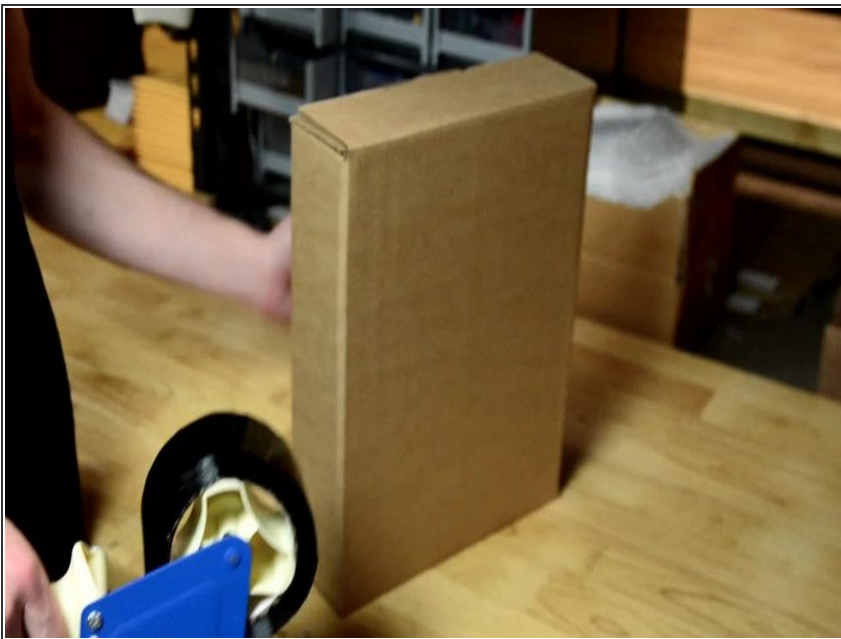

- Fill the box with the appropriate packaging materials.

Step 5

- Close up the end of the box just as you did with the other end.

Step 6

- Apply a single, straight line of tape around the box.
- Be sure to go fully around the box with the tape.

⚠ Do not overlap tape multiple times.

Step 7

- Apply the proper label to the box for shipping.
- ☑ For international boxes, remember to attach the additional label.

To reassemble your device, follow these instructions in reverse order.
